

NEWS RELEASE

For Immediate Release

The future of the construction industry is here! Join us on Nov. 20 for CANSTech – The Construction Technology & Innovation in Halifax, NS.

Halifax, NS – (09/20/2018) The future is calling and it says technology in the construction industry is here to stay. On November 20, 2018, more than 2,500 people will descend upon the Cunard Centre in Halifax, Nova Scotia, for CANSTech – the construction technology and innovation trade show for the commercial, industrial and institutional construction industry.

“CANSTech will bring some of the world’s best technology, equipment, applications, software, machinery, and services to Nova Scotia so those in attendance can feel it, experience it, and see what the world has to bring in terms of innovation and technology for the construction industry,” says Construction Association of Nova Scotia president, Duncan Williams. “We want to help companies build their businesses and technology is one of the best ways for them to compete on a local and international scale.”

Hosted by the Construction Association of Nova Scotia, CANSTech will bring exhibitors, sponsors and world-class speakers together who will showcase new technologies, upcoming trends and innovative products all under one roof.

Presenting sponsor, Procore Technologies, was an early adopter and supporter of this initiative and jumped at the chance to partner with CANS on this one-of-a-kind of event in Nova Scotia.

“Procore believes that technology adoption should be one of the foundation pillars of every Construction Association as they are in a great position to guide their members through disruptive times being accelerated by technology, but also to stay relevant to upcoming generations of construction leaders who are tech savvy,” says Procore Technologies field marketing manager for Canada, Sanjeev Dhillon.

CANS is currently recruiting exhibitors looking to set themselves apart from the competition using technology, innovative products and cutting-edge processes. There will be a variety of spaces available and exhibitors are encouraged to bring forward products and services that are interactive for attendees to engage with. Application deadline is September 28, 2018.

“We’re looking for companies who specialize in anything from building information modeling, construction management tools, technology funding, and innovative projects to machinery, equipment, robotics, prefabrication, and wearable technology – and so much more,” says Williams.

This event will be free to attend and will bring together construction professionals, related industry groups, tender-calling authorities, design professionals and more.
