

Anathea Fenton

FalkBuilt Ltd.

Anathea Fenton is a Principal with Falkbuilt Halifax and the Past-President of the Design and Construction Institute of NS (DCI). Falkbuilt is a seamless interior construction solution that has digitized the interior construction process. Digital Component Construction is a new way of approaching interior construction that combines long-proven construction methods with new next-gen technology to build beautiful, high-performing environments. Falkbuilt's technology platform empowers architectural and design freedom, quality and sustainability and follows the same process as conventional construction—but far faster, more efficiently and cost-effectively. Precise components are manufactured in Calgary and delivered to the site within four weeks of order entry.

Anathea has spent over 20 years working with clients to integrate pre-manufactured interior construction solutions into their projects. This approach to construction allows her to combine her degree in Biology and passion for environmental sustainability, with her family history in construction. She has worked with Fortune 500 companies, healthcare systems, education institutions, start-ups and not-for-profits in the US and across Canada to help build their projects faster and on-budget while creating long-term value for their real estate.

She is a proud mom to two teenage daughters, a partner to Stephen, and a happy pet owner. Loves the ocean, reading, travelling, running, and hiking.
